Preliminary Amendment Dated: January 27, 2006

## **AMENDMENTS TO THE SPECIFICATION**

Please add on page 1, line 8, the following heading:

-- BACKGROUND OF THE INVENTION --.

Please rewrite the Abstract on page 56 as follows:

## -- Abstract of the Disclosure

## **INJECTING APPARATUS**

An injector is automatic in that the needle is inserted into the injection site (e.g., a patient's skin) with user or caregiver assistance, the delivery is automatically initiated upon needle insertion, and the needle is retracted automatically after the end of delivery. Preferably the needle is not seen by the user prior to, during or after injection. Prior to and after injection, the needle is hidden in the device so as to avoid any potential injury or health risk to the user or health care provider. The injector 10-includes a housing 100-and a shield 200-arranged to slide relative to the housing and a driver 300-moving during drug delivery. The housing 100-and shield 200-form a cartridge enclosure. The cartridge 500-is shielded and locked after delivery is completed. A needle-locking mechanism can be used in any number of pen-like injectors or safety needles. --
